NORTHWEST ASSOCIATION OF NETWORKED OCEAN OBSERVING SYSTEMS (NANOOS)

The eye on the Pacific Northwest's ocean and coast

NANOOS Hypoxia Watch

Click on an asset (real-time data or model output). Each link will take you directly to see the latest oxygen data on the NANOOS Visualization System.

When oxygen is below 2 mg/liter, that is hypoxia and sensitive organisms may be stressed or perish; oxygen below 5 mg/liter may cause avoidance behavior in some species.
